Click2MD

Click2MD offers physician services at home. A doctor will come to your house, evaluate you, and make treatment recommendations.

Doctor comes to you

Our mission is to provide personalized and compassionate quality medical care at home.

Our goal is to keep our members healthy, out of the hospital and long-term care facilities.

Age at home on your own terms

Our Services

House Calls, Primary Care & Chronic Disease Management

The physician formulates a treatment plan optimized for best outcomes.

- Medical evaluation of chronic diseases (e.g. diabetes, hypertension, asthma, depression, arthritis, migraines, CHF, COPD, AFIB, CVA, etc)
- Review of labs, medications, medical history, and perform a physical examination at home
- Fall risks are evaluated and plans are developed to reduce the risk
- Dementia screenings are done on a regular basis. Plans are developed to stop or slow dementia progression utilizing pharmacological and non-pharmacological interventions
- Nutrition evaluation and recommendations

By understanding your unique circumstances and issues we make a personalized care plan

Medication Management

The physician analyzes the medications that you take.

- Eliminate duplicates or unnecessary medication
- Checks the possibility of adverse drug interactions
- Substitute generic medication or a pill splitting strategy, if possible, to save costs
- Immunization(s) can be arranged or given

Wound Care

Many patients develop wounds on weight-bearing areas (e.g. lower back, feet) due to immobility, diabetes or peripheral vascular disease. We treat these wounds while the patient is at home, decreasing recurrent infections, avoiding multiple hospitalizations, and prolonged IV antibiotic use. We also manage nutrition to improve wounds.

Lab Tests & Other Investigations

Labs, x-rays, and other tests can be ordered at discounted prices. Results are discussed with the patient and designated family members. EKG, PFT (lung function test) can be done at home.

Medical Records & Paperwork Administration

Maintain medical records and provide access to other healthcare providers upon the patient's request. Different forms can also be completed and maintained on the patient's behalf.

- MOLST forms (DNR/DNI) are completed and updated yearly
- Maintenance of other paperwork (e.g. health care proxy, living will, next of kin, any other information patient wants us to keep)

How Our Membership Works

A physician will come to your house and evaluate you, review labs, medications, medical history, and perform a physical examination.

The physician will then develop a treatment plan based on the findings and the patient's wishes. The plan will be discussed with both the patient and family.

Care is structured on a monthly membership. Each month the physician will evaluate you at home and continue to provide care.

The physician is available for unlimited telephone consultations and video calls. We will also come to the home in addition to the regular visit if needed.

Costs

Our monthly membership fee is \$350.

Membership can be canceled at any time you wish.

Our membership includes all the medical services, including house calls, as outlined above. Our care is personalized, compassionate, and is provided by a physician on a regular and as-needed basis. We also work closely with other healthcare providers and healthcare aides to coordinate care.

Most People Prefer Independence

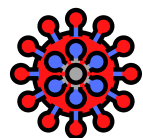

Assisted-living and nursing home life is regimented (meal times, sleep time, visitation limitations). You are restricted to seeing a facility physician. Aides take care of multiple residents at the same time.

Money coming from social security and insurance usually goes directly to these facilities, resulting in a small personal stipend to you

Nursing homes are at higher risk for infection from visitors, workers, and other residents.

Our members get personalized medical care, physician availability on short notice, and unlimited telemedicine. Our goals are to decrease unnecessary hospitalizations and ER visits while improving your quality of life and saving you money by avoiding out-of-pocket expenses.

Click2MD Member Story

It's great to have a doctor to come to the home for people that have a hard time getting out. Dr. Majeed is available for any questions or concerns. Takes his time & is truly dedicated to each & every person he comes in contact with. Great Human Being!

Kim DeSantis Matheis,
Quality Living Homecare
Lockport, NY
(716) 213 8347

Jane D. is in her late 70s and lives near Buffalo in her home. She is widowed and her children live out of state. Her children love her and manage her medical and non-medical care, remotely. Some of her illnesses include diabetes mellitus type 1, heart disease (CAD, including a history of heart attack), high cholesterol, hypertension, degenerative arthritis, and anxiety depression.

Before we got involved, Jane usually had 1 to 2 hospitalizations yearly (last few years), at times needing ICU care. Kim DeSantis Matheis (Quality Living Homecare) coordinates her daily living needs, including bathing, moving, social interaction, feeding, and medications. We started providing medical care to Jane in late 2019. This included evaluations at home on a regular basis, telemedicine and phone consultations any time of day or night, on an as-needed basis, medication management and refills, arranging for blood tests and x-rays. Since our involvement, Jane has had no hospitalizations or ER visits. Her general disposition and interaction have improved significantly. She is more alert and communicates with family through video chats. Her cognitive functions have also improved. Recently Jane started doing 500-piece puzzles!

Previous fears of dementia have abated, and we communicate with Jane, Jane's family, and Kim regularly. Jane, her family, or Kim can call us at any time to voice their concerns or make suggestions. In addition, we were able to reduce some of Jane's medications. Her last detailed blood test done recently confirms her significant improvement, all levels in the acceptable range (e.g. blood sugar, lipids, Vitamin D).

Click2MD Value Proposition: We Help People Age at Home

- The cost of aging at home is less than assisted living facilities and nursing homes
- People enjoy the familiar atmosphere and control of their environment
- Independence from restrictions (i.e. food, sleeping time)
- Safe environment without multiple assisted living care workers and residents nearby who maybe sick and/or have several outside visitors

We offer personalized one-on-one care, which helps improve the quality of care and reduces medical errors due to negligence

Click2MD Team

Click2MD was founded and is led by Mian Majeed, MD. He has practiced medicine for over 30 years

Mian Majeed, MD

Dr. Majeed has practiced throughout Western New York since the late 1980s, including at Brooks Memorial Hospital in Dunkirk (Chair/Director of Emergency Department), The Catholic Health System (Sisters Hospital - St. Joseph's Campus and Mercy Hospital), Medina Memorial Hospital, and Eastern Niagara Hospital in Lockport.

He has taken care of patients with various illnesses in both outpatient and inpatient settings, including emergency departments, medical units, and intensive care for over three decades.

Salma Khalil, MD

Dr. Khalil has practiced medicine throughout Western New York since the late 1990s, including positions at State University of New York (SUNY) Fredonia (Medical Director for Student Healthcare), Millard Fillmore Suburban Hospital, Roswell Park Cancer Institute, Eastern Niagara Hospital, Buffalo General Hospital, and VA Hospital Buffalo.

She has extensive experience in both outpatient and inpatient settings and has taken care of patients with various illnesses in medical and intensive care units.

“

Dr. Majeed is very well informed, extremely professional and compassionate which makes a big difference to me. He has been thorough with evaluation and analysis. He has very good opinions/advice on care and treatment for my issues.

”

Eileen A. Sullivan
